Medical Summary Letter of Ami P. Desai, M.D., dated February 14, 2025

MEDICAL SUMMARY LETTER

February 14, 2025

Re: Lawrence J. Weiner (deceased) MRN: [redacted]

DOB: [redacted]

To Whom It May Concern:

As Mr. Weiner's primary care physician at Michigan Avenue Internists, LLC from 2014 until his death in December 2023, I have prepared this summary based on my contemporaneous medical records and direct treatment of Mr. Weiner. My observations and documentation of his physical and cognitive decline are detailed below from his medical records in my possession.

I directly observed and documented Mr. Weiner's decline through regular office visits from 2014-2020, telemedicine visits during the COVID-19 pandemic (2020-2023), and a return to in-person visits as permitted. These observations are supported by specialist consultations, laboratory data, and imaging studies contained within my medical records.

The following represents the progression of Mr. Weiner's physical and cognitive decline based on my medical records and direct observations:

Physical Decline Timeline:

2019 (December Visit):

- Height: 5'11", Weight: 184 lbs
- Notes indicate "hearing not great, not wearing hearing aide"
- Speech noted as "a bit slow"
- Taking carbidopa/levodopa for Parkinson's
- Working but noted fatigue

2020 (March-April Telemedicine Visits):

- Developed urinary retention requiring catheter
- Documented urinary pain issues
- Maintains ability to work out 30 minutes/day with daughter via Zoom
- Some balance issues noted

2021:

- Weight decreased to 162 lbs
- BP recordings show stability (106/68, 95/61)

- Post-lung cancer diagnosis in August
- Continues boxing despite diagnosis

2022:

- Exercises 1.5 hours daily despite increased fatigue
- Memory/fatigue worse after COVID
- Continues seeing Dr. Burke for Parkinson's management
- Having trouble with medication compliance

2023 (Final Recorded Visits):

- Weight: 164 lbs
- BP: 105/56, Pulse: 57
- Still exercising but limited
- Required assistance organizing/reviewing documents
- Documented groin hernia
- Penile pain/dysuria issues

Cognitive Decline Timeline:

2017:

- First cognitive testing with Dr. Kennedy
- MMSE score 26/30
- Noted as "NO functional deficits"
- Operating at "superior level" overall

2018-2019:

- Increasing forgetfulness documented
- Tremor affecting handwriting/documentation
- Speech becoming slower
- Early medication management issues noted

2019-2020:

- Increasing memory issues noted
- Required medication management assistance
- Speech becoming slower

2020:

- March/April: Telemedicine visits show increased confusion about medical care
- Required assistance understanding medication changes
- Family increasingly involved in medical discussions
- Still maintained professional comprehension but slower processing
- COVID-19 pandemic isolation impacted cognitive engagement

2021 Detailed Progression:

- January-March:
 - Not "totally thinking clearly" per medical records
 - Difficulty with medical decision-making
 - Required family help with medication schedule
 - Memory affecting appointment management
- April-June:
 - Memory issues affecting daily function
 - Needed medication supervision
 - Family involved in all medical decisions
 - Documented confusion about treatments
- July-September:
 - MRI showed microvascular disease
 - Brain atrophy documented
 - Small left hemisphere cyst found
 - Increasing memory issues
 - Calculation difficulties emerging

- October-December:
 - "6 cit 12/28, not getting all his meds right"
 - Terry taking over medication management
 - Required supervision for complex tasks
 - Family reporting increased confusion

Significant Markers of Decline:

- Progressive difficulty with:
 - Medication management
 - Appointment scheduling
 - Complex decision-making
 - Professional tasks
 - Mathematical calculations
- Increased need for family supervision
- Medical documentation showing consistent pattern of decline
- MRI evidence of neurological changes

This cognitive decline was documented through regular clinical observations, family reports, specialist evaluations, and diagnostic testing, showing a clear progression from mild changes in 2017 to significant impairment by Jan 2021.

This medical summary is based solely on my medical records and direct treatment of Mr. Weiner over nine years. If additional medical documentation is needed, I can provide specific office visit notes, test results, and specialist consultations from my records.

This represents a gradual but steady decline in both physical and cognitive function, with preserved areas of function despite multiple serious medical conditions.

Sincerely,

Ami P. Desai, M.D.
